You will not be disappointed, it truly is a marvel - the frame is a work of art.

I went for the XL and I am 6'2" if it helps, it feels really special and I can't quite believe how light the bike feels. However I have come from a DMR DJ bike single speed for the last 4 years which was a heavy lump of metal.

I ordered through UK distributor Cranknuts, super service from Mark and lot's of advice and guidance. They wax oiled the frame inner as part of their service, I definitely recommend them.

I had the bike specced out by boingbikes in Bristol, miles from me but lot's of online communication helped me get the bike built to my requirements. <https://www.facebook.com/BoingBicycles?fref=nf>

I was so tempted to go single speed and I still might in due course but I am really enjoying the use of the 1x10 gears for now.

I am pleased you like the pictures too 😊
